

Insulated Metal Panels

An insulated panel consists of an insulating layer of rigid core sandwiched between metal building panels. Insulated Metal panels are available in a wide variety of panel profiles, colors, and applied finishes. They have exceptional insulating properties, recycled content, and easy installation.

As codes and regulations continually call for sustainable building materials, interior and exterior insulated metal panels offer numerous advantages over other construction products. They are ideal for architectural, commercial, industrial, institutional and cold storage applications. Metal Wall Panels can be installed both vertically and horizontally allowing for that perfectly desired architectural look. The standing seam roof profile leads the industry in weather-tightness, and the fire-rated offering can give up to a three-hour fire rating.

Advantages

- Virtually 100% recyclable
- Help meet green building standards
- Many different color options
- Decrease thermal bridging
- Exceptional insulating properties
- Superior spanning capability
- Accelerated installation times
- Cost-effective pricing
- Rigid feel
- Streamlined architectural appearance
